

SHADI SEAIDOUN

ASPIRING SOFTWARE ENGINEER

Barrie, ON • (705) 331-8434 • shadiseaidoun@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

SUMMARY

Accomplished Computer Science graduate with proven expertise in software development, automation, and data analysis across diverse industries including government services and food distribution. Experienced in leading technical teams and implementing end-to-end solutions from route optimization algorithms to inventory management systems. Combines strong programming capabilities (Java, Python, C/C++, SQL) with effective leadership and trilingual communication skills in English, French and Arabic. Demonstrated success in optimizing business processes, developing user-friendly applications, and solving complex computational problems through innovative approaches.

TECHNICAL SKILLS

- Python
- C++
- C
- Java
- SQL
- Git
- OpenGL
- GLM
- GLFW
- Vercel
- Microsoft 365
- Power Automate
- Power BI
- SharePoint
- Excel

SOFT SKILLS

- Problem Solving
- Adaptability / flexibility
- Time Management
- Collaboration
- Leadership

PROFESSIONAL EXPERIENCE

Team Lead / Cloud Data Analyst • Shared Services Canada (Remote)

Jul 2022 – Apr 2024

- Led a team of 5 students, ensuring task completion and providing support as needed to maintain productivity and quality standards. Conducted weekly touchpoints to monitor progress, address challenges, and align efforts with project goals.
- Automated business request handling by pulling data from the BITS database as an Excel file; used Power Automate to transfer each row onto a SharePoint list and notified the respective manager of new business requests.
- Automated candidate document processing by developing a Microsoft Forms workflow that generates SharePoint folders upon submission, organizes required signing documents, and updates an MS List for real-time status tracking

Software Engineer • Sunrise Wholesale Produce (Remote)

May 2024 - Apr 2025

- Developed and optimized delivery route algorithms using Python to minimize travel time and fuel costs for produce distribution to restaurants and commercial clients, resulting in improved operational efficiency and reduced delivery overhead.
- Integrated Google Maps API functionality with Python to provide real-time navigation and traffic analysis, enabling drivers to access dynamic routing information and delivery status updates.
- Automated inventory management system using Python and SQL to monitor stock levels and generate real-time alerts for low inventory products, enabling proactive restocking and preventing supply chain disruptions for restaurant clients.

PROJECTS

3D Path Planning for NP-Hard Shortest Path Problem

- Implemented and compared three fundamental algorithms for the NP-hard problem of 3D shortest path planning
- Developed a parallelized version achieving 76% faster computation while maintaining path quality
- Built an interactive visualization system with C++, OpenGL and ImGui for real-time performance monitoring across varying obstacle densities (1-500)

EDUCATION

The University of Western Ontario

Sept 2021 - Apr 2025

B.Sc. in Computer Science: Honours Specialization in Computer Science, Minor in Mathematics

Relevant Coursework: Machine Learning/AI, Operating Systems, Computer Networks, Parallel and Distributed Computing, Databases, Calculus, Linear Algebra, Probability and Statistics
